ABSTRACT:

PROBLEM TO BE SOLVED: To securitize an intellectual property right as a credit so as to collect funds from a stock market and the like.

SOLUTION: The intellectual property right as an invisible asset is taken as a credit for securitization and securitized by means of a securitization evaluation list and evaluation program software on the basis of data based on a computer and investigation program software so as to be turned into a securitized instrument capable of raising funds from the stock market and the like. By means of the software, a plurality of intellectual property rights can be evaluated as one credit or divided into a plurality of licenses, and the value of each license can be calculated, and consequently, the intellectual property right is turned into the securitized instrument.
